Providing Complete WMS and EDI Software and Solutions to the Logistics Industry

Ramp Systems WMS and EDI software provide Integrated Supply Chain Execution capabilities and efficiencies in Distribution, Fulfillment and Public Refrigerated Warehouse operations that are second to none. Complete visibility and tracking capabilities allow for total control of your inventory. RF driven capabilities allow real time tracking and reporting and minimize cost while increasing productivity. This reduces the customers overall cost while allowing for more through-put. With Interchange, the connectivity and full integration capabilities allow you to connect to all your customer, venders and carriers using a multitude of capabilities including AS2, XML, EDIFact,

Interchange WMS enables our customers to have total visibility into our system to view their real-time inventory, shipments and status of their ongoing projects and Interchange EDI allows for interfacing to most major ERP systems.

Ramp Systems WMS Key Features and Functions
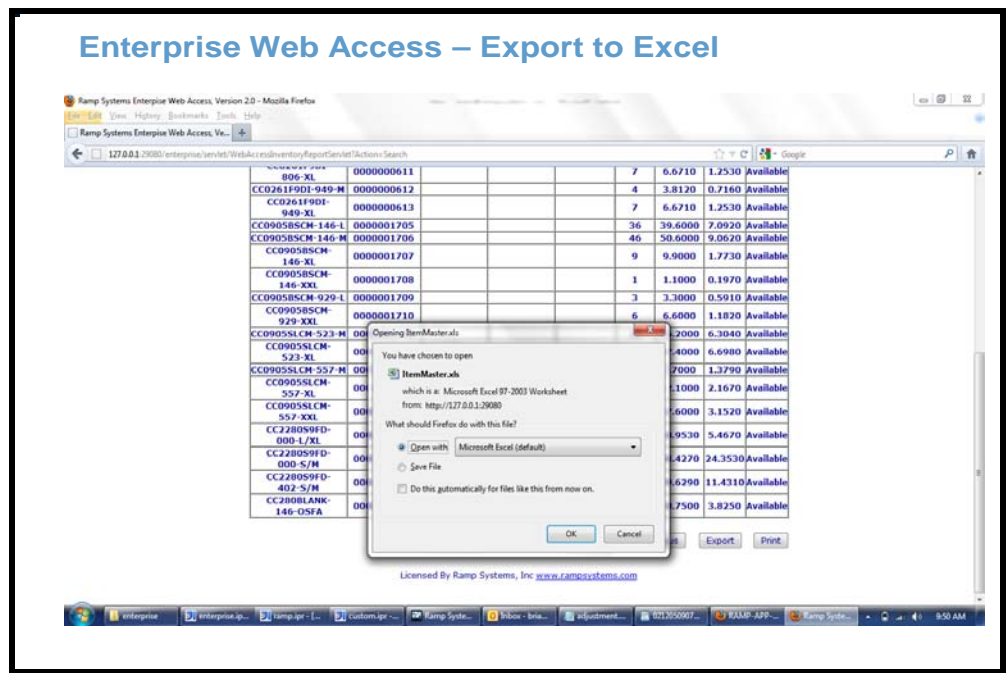

INBOUND EXECUTION
Receiving, Staging, Locating, Quality control, SKU Parsing, Directed Put Away

OUTBOUND EXECUTION
Order Entry, Order Planning
Carrier Routing/ Rating, Allocation, Master BOL
Directed Picking, Manifesting
Shipment Processing

3PL WEB ACCESS
Administrative capabilities, Order processing, receipt processing, inventory visibility, inventory tracking, invoice capabilities, item tracking, reporting, Alerts management, Dash board Capable, customer customizable.

Enterprise Web Access – Export to Excel
